**RE: South Delta Improvements Program**

Dear Director Snow:

On behalf of Pajaro Valley Water Management Agency, I am writing to express our support for the Department of Water Resources' (DWR) South Delta Improvements Program (SDIP). We view this program as a critical water supply, water quality and environmental project designed to meet California's diverse water needs.

The Pajaro Valley Water Management Agency (PVWMA) was established in 1984 as a special district responsible for the effective and efficient management of water resources for agricultural, municipal, industrial and other uses within the Pajaro Valley Basin, which spans portions of three California counties: Monterey, Santa Cruz and San Benito.

The Agency's mission is "to efficiently and economically manage existing and supplemental water supplies in order to prevent further increase in, and to accomplish continuing reduction of, long-term overdraft and to provide and insure sufficient water supplies for present and anticipated needs within the boundaries of the Agency. It is anticipated that long-term overdraft problems may not be solved unless supplemental water supplies are provided." The PVWMA has a CVP entitlement of 19,900 acre-feet per year, therefore is very concerned about the reliability of the Delta's water delivery system.

As you know, California is facing a critical challenge: We need a safe, reliable and high quality water supply to keep up with our rapidly rising population and fast-growing trillion-dollar economy. However, with tight water supplies in our arid state, we must better utilize our existing water resources and infrastructure; or put our communities, farms, environment and businesses at great risk. Given its importance the San Francisco Bay/Sacramento-San

Joaquin Delta, we need better ways to manage the Delta's water delivery system, as well as the water itself. We need to make every drop count.

In 2000, the state and federal governments initiated the historic CalFed Bay-Delta Program to manage the Bay-Delta's water resources and eco-system. A unique collaboration of interests supported the plan including environmental organizations, water agencies, business interests, farmers, and state and federal water and fish agencies. SDIP is the next step forward in this long-term planning effort for the Bay-Delta.

SDIP is a responsible and balanced plan to better utilize and integrate our existing water management infrastructure in the Delta. Collectively, it will improve our state's water supply reliability, water quality and the overall health of the Bay-Delta ecosystem. The program will construct seasonal tidal gates to protect fish, and improve water circulation and quality in the Delta, dredge select Delta channels to improve water deliveries for local farmers, and allow State Water Project deliveries to increase modestly – only when needed and environmentally safe to do so.

Currently, the state is constrained in its ability to use surplus water supplies. We have the infrastructure to move the water, but until SDIP is approved, the state's water managers cannot fully or responsibly use the existing system. SDIP calls for only a 3-5% increase in the average amount of water pumped from the Delta. More significantly, SDIP will provide the flexibility to shift the timing of water deliveries when surplus is available and when environmentally safe to do so. SDIP is an ideal option for California to advance – it will not require building a new project or the construction of major new infrastructure. And, funding for the program has already been secured through passage of voter approved bonds in 2000 (Proposition 13).

Importantly, SDIP will help protect important Delta environmental resources. Specifically, it will help protect fish species in the Delta channels. At the same time, by providing the state greater flexibility in how and when SDIP operates its system of pumps, fish are granted greater protections.

Given all these points, SDIP is supported by a statewide, broad coalition of water, agriculture, business, planning organizations, and local government officials including the Association of California Water Agencies, State Water Contractors, California Chamber of Commerce, California Business Properties Association and the Western Growers Association.

Water is the lifeblood of California – critical to our families, farms, and businesses. It is our responsibility to use this precious resource wisely through all possible best management practices, including water conservation, recycling and storage, to ensure California's water future. It is imperative that we have a more flexible water delivery system so that we can continue to accommodate growth in our population and economy while relying on existing water supplies.

JAN 09 2006 043

Again, we strongly support SDIP and encourage all key stakeholders to help advance this critically needed project.

Sincerely,

A handwritten signature in cursive script that reads "Mary Bannister".

Mary Bannister  
Interim General Manager
